

ACURLITE ADVANTAGE

Year in Review: 2011 was off to a slow start. This year has been a struggle for many of our customers and vendors. No one seems to be immune to the state of our economy. We would like to say a special thank you to all of our customers and vendors/partners who helped us through these tough times. Together we are as strong as ever!!

*CARLSBAD CAVERNS, NM ~ Photovoltaic Panels -
Acurlite is currently the only company capable of running
the wiring through our system without interfering with
the internal drainage path. Electrical wiring will NEVER
rest in water.*

Jericho Terrace- One of the country's premier catering facilities has contracted with Acurlite for a high-quality, compound-bent frame and glass skylight. Nine of the 10 customers choose to book the skylight room over the standard room.

*Jericho Terrace –
Long Island, NY*

Elumatec 151 Profile Machining Center - The 5-axis machine allows Acurlite to cut, drill, mill, and notch all at one machine center. The result is improved quality, diverse capabilities, and faster output. This machine is one of 15 currently in use in the United States.

**Elumatec – 151 (5
Axis CNC Machine)**

New Products- Two new products have been added to the architectural building products Acurlite manufactures: an aluminum shade system and a terrace/folding glass wall system. We have taken advantage of the economic downturn and decline in construction demand to have our design team and engineers develop these two new products, which will be available to our industry later this year.

Taking a few moments to reflect on the perseverance and hard work that our team has put forth over the last 10 years is one of our proudest accomplishments. Here at Acurlite we are doing our part to challenge ourselves to grow in this turbulent economy. Our philosophy of designing and offering state-of-the-art products to our customers with unmatched quality, support, and service has become our company trademark. Acurlite continues to be a leader in our industry by strategically investing in product upgrades such as achieving our South Florida building compliance and installing state-of-the-art CNC manufacturing equipment.

Looking to the future, we at Acurlite are excited to announce our continued strong business growth and the development of new state-of-the-art products: a new sunshade system and commercial fenestration products incorporating cutting edge European technology designed, engineered, and manufactured here in the USA. In an era when manufacturing jobs are being sent overseas, Acurlite is continuously in pursuit of preserving the strong American work ethic of which we are so proud.

Life is very simple. Be good to your fellow man and always strive to build a quality product, support your country and your fellow American. After all, there is no place like home.
